## NETWORKING

Bonmwa Networking & Solutions. specializes in the design, installation, administration and support of Local Area Networks (LANs), Wide Area Networks (WANs) and wireless setup (Wi-Fi) base on Microsoft's Windows and Linux Network operating systems.

# NETWORKING

## UTP STRUCTURED CABLING

The installation of data cable is the main backbone link between equipment rooms and telecommunications closets, of all major network solutions, campus network solutions, and where there is a need for large network data transfer within data storage centers. It is also the main backbone link for Metropolitan Area Networks (MAN), Local Area Networks (LAN), Wide Area Networks (WAN) or if there is a cable length issue with using copper cable solutions like Cat5 or Cat6 cabling systems (maximum 90m copper cable installation).

## TELECOMMUNICATION.

Telecommunications and Networking Services (TNS) is responsible for the design, infrastructure, maintenance, and support of the network, telephone services, software, and hardware. We have five sub-departments: Bonmwa Telecommunications Services, Data Networking Services, Classroom Technology & Video Services, Help Desk, and Technology Support Services (TSS). Value-oriented, basic VoIP call experience for hospitality environments Ideal for lobbies, guest rooms, elevator bays, and conference centers Supports both desk and wall-mounted deployments Include your brand with co-branding plate and paper insert Earth-friendly; IEEE Class 1 rated for low power consumption

# NETWORKING

## AMC CONTRACT.

We Provide Annual Maintenance Contract (AMC) service to customers to help keep their products in proper working condition. AMC signed between the company and the customer to allow regular checkups and routine work to keep the performance and quality of the products in good condition. These services are provided for technical support as well as renewal of the software and various other anti-viruses. Technical Services has been formulated recently to become a powerful arm to provide practical Support as well as Solutions for Installation, Commissioning and Maintenance activities as well as customer training needs.

# NETWORKING

## DATA CENTER SETUP.

Data center technology is critical to overall organization. Not only it houses critical network systems which are vital to the daily operations of modern organizations, it is also one of biggest investments for the organization. To maintain your data center servers and storage devices. Networking & Solutions offers different levels of maintenance and support that best align to the customer business needs.

## NETWORK MANAGEMENT.

Proper Network maintenance is both preventive and corrective. When technical failures occur, the consequences are typically not only expensive, but have enormous time delays in operation productivity for the business. Network maintenance provided by Bonmwa Consultants. Networking & Solutions streamlines your systems and speed up your business performance. The service provided has the appropriate resources. We provide a fully integrated and automated solution which optimizes fault management and ensures availability, unifies fault and performance management, automates change and configuration management to ensure compliance, and automates IT processes.

## SAFETY / SECURITY

Security is the degree of protection against danger, damage, loss, and criminal activity. We help customers to protect people, property and assets, optimize processes to improve business efficiency. we offer the possibility for any authorized person to remotely access live images over the network

## CCTV SURVEILLANCE SYSTEM.

Closed Circuit Television (CCTV) is a system where the circuit in which the video is transmitted is closed and all the elements (camera, display monitors, recording devices) are directly connected. This is unlike broadcast television where any receiver that is correctly tuned can pick up and display or store the signal. Thanks to reduced costs in the manufacture of cameras and video recording equipment, camera systems are becoming more and more commonplace in smaller businesses, and even private homes.

# SAFETY / SECURITY

## RFID ACCESS CONTROL SYSTEM.

Access electronic or simply put RFID automated access for door controls to buildings, departments, rooms, secured closets (wiring, PBX, etc.) and cabinets is very cost effective and secure to use. Many people do not realize how easy it is to implement card access systems such as card access door or doors using RFID readers and RFID Cards or Keyfobs for Secured Access Control Management. You can even use smart readers for computer rooms and securing individual computers.

## RFID & FINGER PRINT ACCESS CONTROL SYSTEM.

The New Generation of Smart Devices in Biometrics for Access Control enhances building security, internal communications, and employee management, at a significantly lower total cost of ownership than previous biometric systems for physical access control. Whether being used to access a building, secure restricted locations within, or for time and attendance management, biometric authentication technology has come a long way. Just a few years ago, the debate surrounding biometrics was focused on whether biometrics were accurate and could handle large populations, among many other operational issues.

## WIRELESS LAN DISTRIBUTION NETWORK.

In a wireless LAN, the switch or hub connects access points together. This creates a wired backbone enabling wireless LAN roaming protocols to work. Most access points accommodate connection to a switch or hub via an RJ -45 connector and twisted pair (Category 5) wiring. The Cat5 cable can be up to 100 meters (roughly 300 feet) long. As a result, you need to plan the installation of hubs or switches to avoid exceeding this distance. If distances exceed the 100 meters, you can interconnect switches via optical fiber and place switches close enough to access points in various parts of the facility.

## INFRASTRUCTURE

Cabling is the longest life cycle component of the entire network. A standards compliant cabling system can "future-proof" your network and guarantee continued application support. flexible cabling infrastructure to support multiple voice, data, video and multimedia systems.

# CONSULTANCY

## CYBER SECURITY CONSULTANCY

We are the leading cyber security company in Kenya and east and central Africa. We provide efficient services with regards to cyber security related issues such as System testing, penetration testing, network and server security. We also provide consultation on how to prevent hacking and maintain security of your data and systems. We also provide Cybersecurity awareness, capacity building as well as early warning and technical advisories on cyber threats on a 24/7 basis. We provide guidance on the best infrastructure to implement such as the firewalls to use in order to prevent malicious intrusions. Our IT & Data Security services are custom designed to proactively reduce real threats our clients face. Your company's existing technology infrastructure, online activities, and future IT planning all play a role in the security program our team develops.

# IT CONSULTANCY

## We Guide Clients in Achieving Success through Technology Adoption
